GROWIFY DIGITAL - MANAGEMENT SUMMARY

Associate Data Analyst Assessment | Analyze. Diagnose. Reallocate. Grow.

The point of view

The account can work toward +25% sales without increasing the marketing budget, but the target is challenging rather than guaranteed. The most credible path is to shift spend away from persistently weak campaigns/ads, scale proven winners gradually, and improve conversion efficiency. Historical performance from the proposed reallocation is directionally sufficient to cover the sales gap, but diminishing returns must be validated.

1. What is working?

Google is the strongest channel on efficiency: approximately 5.86x ROAS on ~₹397.6K spend, versus Facebook at ~1.89x on ~₹5.88M. At campaign level, selected Google Search/PMax campaigns show ROAS above 6x, while the strongest high-volume Facebook campaign is MOF & BOF India + intl at 2.28x with 279 purchases.

2. What is not working?

The largest issue is inefficient budget concentration. Facebook absorbs roughly 93.7% of paid-media spend while producing materially lower ROAS than Google. The Facebook INT Direct campaign is a clear cut candidate at 1.11x ROAS on ~₹423K spend. Several individual ads are also below 1x ROAS.

3. Winners and losers

Type	Examples	Decision
Winners	Google LuxuryP Search India 12/12/25 (12.08x); Google P.max HP EOSS India (6.40x); Facebook MOF & BOF (2.28x)	Scale carefully
Losers	Facebook INT Direct (1.11x); several Flat 40% / Special Prices creatives below 0.7x	Reduce / pause / rework

4. Where should budget move?

Move	Amount	Rationale
Reduce weak spend	~₹660.2K	Focus on sub-1.5x ROAS candidates
Scale proven winners	~₹660.2K	Reinvest into high-ROAS, meaningful-volume campaigns
Net budget change	₹0	Total marketing budget remains unchanged

5. Why is the brand not scaling?

1) Spend is concentrated in a lower-efficiency platform mix. 2) Budget is trapped in weak campaigns and creatives. 3) Creative performance is highly uneven, so broad scaling would amplify waste unless winner replication and controlled testing improve efficiency.

6. How do we reach +25% sales?

Metric	Value
Current Shopify sales	₹14.30M
Target sales (+25%)	₹17.87M
Current paid-media spend	₹6.28M

Current sales / spend ratio	2.28x
Required ratio at flat spend	2.85x
Required efficiency improvement	25%

The proposed reallocation has a historical-ROAS scenario of approximately ₹3.64M incremental revenue, compared with a ₹3.57M sales gap. This makes the target plausible on paper, but not assured. Validation should use controlled budget increases, creative tests, landing-page tests, and guardrails for ROAS deterioration.

Top 5 actions

1. Cut/reduce persistently sub-1.5x ROAS spend and reinvest it.
2. Scale the strongest Google campaigns gradually, not in a single jump.
3. Protect and expand high-volume Facebook winners such as MOF & BOF.
4. Replicate winning creative concepts and rework weak Flat 40% / Special Prices creative.
5. Run structured 7-day scaling and conversion tests with explicit ROAS/conversion guardrails.
